INOR

In the service of life

By Agnerys Sotolongo / Photos José Meriño

Cuba's National Institute of Oncology and Radiobiology (INOR in Spanish) has a history of more than 50 years dedicated to the diagnosis, treatment and research of cancer, always in the constant search for new therapies to provide the patient with longer survival and a better quality of life.

The INOR is notable for the introduction and development of advanced medical technologies that offer treatments of the highest level, comparable to those of prestigious institutions in developed countries.

Cuba's most specialized oncology centre, the INOR offers service based on the highest ethical and human principles for the well-being of the patients, while developing diverse activities in scientific communication.

Its services include surgical, clinical oncology, progressive care and experimental research as well as departments of clinical research and medical imaging.

Besides proven achievements in the practice of conventional medicine, INOR therapeutic options comprise natural methods as a quality of life source to make possible self-healing mechanisms, a new health paradigm resulting from integration and in favour of a humanity more fully in harmony with the laws of nature.

The quality of the facilities and latest generation equipment in addition to medical and paramedical personnel with high scientific and technical training, combine the highest standards with a single goal: protecting your health.

The institute has an international medical care or health tourism service, available for patients from all over the world.
